

BLINKIT

Grocery Sales & Operations – Dashboard Insights Report

Tool Used	Microsoft Power BI
Data Period	2023 – 2024
Dashboard Pages	Introduction · Customer · Product · Marketing · Feedback / Inventory
Prepared By	Sneha Patidar
GitHub Repo	github.com/snehapatidar226-shipit

Project Overview

This report presents a structured analysis of Blinkit's grocery operations based on a multi-page interactive Power BI dashboard. The dashboard spans five analytical dimensions — Customer Behaviour, Product Performance, Marketing Effectiveness, and Inventory & Feedback — providing a 360° view of business performance. Key metrics, data-driven insights, and actionable recommendations are documented for each dashboard page.

26K Total Orders	32.19M Total Revenue	2,500 Customers	14.8K ROAS	3M Clicks
------------------	----------------------	-----------------	------------	-----------

#	Section	Page
1	Customer Analysis	2
2	Product Performance	3
3	Marketing Analytics	4
4	Inventory & Feedback	5
5	Key Takeaways & Recommendations	6

Page 1 — Customer Analysis

26K	10K	2.47M	2,500	2.76M
Total Orders	Total Quantity	Unit Price	Total Customers	Avg Orders

Charts Included

Chart	Type	Purpose
Month on Avg Order	Line Chart	Tracks monthly order volume trend across the year
Segment Wise Customer	Pie Chart	Breaks down customers by type: New, Regular, Premium, Inactive
Segment Wise Order	Bar Chart	Compares order volumes across customer segments
Total Orders by Area	Map Visual	Geographic distribution of orders by city/region

Key Insights

- Orders peaked between August–October, suggesting seasonal demand spikes during festive months.
- Customer base is nearly equally split across 4 segments — New (26%), Regular (25.2%), Premium (24.2%), Inactive (24.6%) — indicating a retention challenge as ~25% customers are inactive.
- All four segments place roughly equal order volumes (~6K each), confirming no single segment dominates.
- Geographic concentration is visible in Indian cities (Deoghar, Erode, Jalna, Orai, Dindigul), suggesting Tier-2 city penetration is a key growth driver.
- December shows a sharp drop in average orders — possible post-festive demand slump.

Recommendations

- Launch re-engagement campaigns targeting the 24.6% Inactive segment
- Expand delivery coverage in identified Tier-2 cities showing order activity
- Introduce loyalty rewards for Regular customers to convert them to Premium
- Investigate December drop — consider year-end promotions to sustain volume
- Prepare inventory & offers ahead of Aug–Oct festive demand surge
- Track Customer Lifetime Value (CLV) per segment for better targeting

Page 2 — Product Performance

26K	1,078	32.19M	2,491	2.76M
Total Orders	Sum of Quantity	Total Revenue	Total Customers	Avg Orders

Charts Included

Chart	Type	Purpose
Category Wise Unit Price	Bar Chart	Compares unit price across product categories
QTY Sold by Category	Donut Chart	Quantity distribution across categories
Product Wise Margin	Bar Chart	Margin % for top products (Dish Soap, Toilet Cleaner, Detergent)
Product Wise Price	Bar Chart	Price comparison across top household care products

Key Insights

- Household Care is the dominant category — it is the only visible category in both unit price and quantity sold visuals, indicating a high concentration of SKUs and revenue in this segment.
- Dish Soap, Toilet Cleaner, and Detergent all show 100% product margin — suggesting either cost data is absent/zero or these are high-margin flagship products.
- Dish Soap commands the highest product price among the three, followed by Toilet Cleaner and Detergent.
- Dashboard filters (Channel, Delivery Status, Feedback Category, Sentiment, Year) allow deep multi-dimensional product analysis.
- Total Revenue of ■32.19M with only 1,078 units suggests high Average Order Value (AOV) per transaction.

Recommendations

- Diversify category analysis — expand product data beyond Household Care
- Validate the 100% margin figures with actual cost/COGS data
- Bundle Dish Soap + Detergent + Toilet Cleaner as a 'Home Care Pack'
- Use Sentiment & Feedback filters to identify low-rated products for improvement
- Cross-sell high-margin household items with lower-margin grocery categories
- Add SKU-level drill-through for granular product performance tracking

Page 3 — Marketing Analytics

3M	14.80K	32.19M	■ 1K–5K
Overall Clicks	Total ROAS	Total Revenue	Spend Range

■ Charts Included

Chart	Type	Purpose
Conversions by Channel	Bar Chart	Compares conversion volume across App, Social Media, Email, SMS
Spend by Channel	Donut Chart	Marketing budget allocation — App (4.21M), Social (4.11M), Email (4M)
Investment & Revenue by Campaign	Bar Chart	ROI comparison across 9 campaign types

■ Key Insights

- App channel leads in conversions, followed closely by Social Media — confirming mobile-first customer behaviour.
- Spend is nearly equally distributed across all 4 channels (~4M each), suggesting an untested, spread-out budget strategy rather than data-driven allocation.
- All 9 campaigns (Category Promotion, New User Discount, Flash Sale, Referral, Email Campaign, Weekend Special, Festival Offer, Membership Drive, App Push) generate similar revenue (~3.5M each) but with lower investment (~1.7M), indicating a strong overall ROAS of 14.8K.
- Festival Offer and Referral Program campaigns appear to deliver among the highest returns visually.
- Email and SMS channels show relatively lower conversions despite equal spend — suggesting these channels need optimization.

■ Recommendations

- Increase App & Social Media budget — highest conversion channels
- A/B test Email & SMS campaigns to improve conversion rates
- Double down on Festival Offer & Referral campaigns — highest ROI
- Reduce equal-split spend strategy; allocate based on channel ROAS
- New User Discount campaign shows strong results — scale up acquisition
- Invest in App Push Notifications as a low-cost, high-reach channel

Page 4 — Inventory & Feedback

11.01M	29K	32.19M	1,109	3,098
Total Amount	Stock Received	Revenue Generated	Damaged Stock	Delivery Partners

■ Charts Included

Chart	Type	Purpose
Stock Quality Distribution	Pie Chart	96.29% good stock vs 3.71% damaged stock
Max/Min Stock Level & Margin by Category	Area Chart	Stock fluctuation across 10 product categories
Monthly Stock Received by Month	Bar Chart	Consistency of stock inflow from Jan–Aug
Category Rating Table	Matrix/Table	Star ratings across all product categories

■ Key Insights

- 96.29% of stock is in good condition — strong supply chain quality. However, 1,109 damaged units represents a non-trivial loss requiring root-cause analysis.
- All 10 product categories (Baby Care, Cold Drinks, Dairy, Fruits & Veg, Grocery, Household Care, Instant Food, Personal Care, Pet Care, Pharmacy, Snacks) are rated mostly 1–2 stars — indicating widespread customer dissatisfaction or data entry issues.
- Dairy & Breakfast and Fruits & Vegetables show the highest max stock levels — perishable categories needing close inventory management.
- Monthly stock inflow is very consistent from January through August — indicating a stable supplier relationship.
- 62K total shelf life days suggests good freshness management across the product portfolio.
- 3,098 delivery partners is a large fleet — operational efficiency monitoring is critical.

■ Recommendations

- Investigate damaged stock (1,109 units) — identify packaging or transit issues
- Address low star ratings across all categories — trigger customer feedback surveys
- Implement dynamic replenishment for perishables (Dairy, Fruits & Veg)
- Use shelf life data to auto-trigger discount alerts for near-expiry products
- Monitor delivery partner performance — link ratings to partner KPIs
- Add a stock-out frequency metric to identify supply gap patterns

Overall Key Takeaways & Strategic Recommendations

Dimension	Strength	Area to Improve
Customer	Even segment distribution	25% inactive customers — needs re-engagement
Product	High AOV, strong household range	Category diversity & margin data validation
Marketing	Strong ROAS of 14.8K, 3M clicks	Optimize Email/SMS; reallocate spend by ROI
Inventory	96.3% stock quality, stable supply	Low ratings across all categories
Revenue	■32.19M total revenue generated	Sustain Dec slump with year-end promotions

■ Top 5 Business Insights

- **Revenue Concentration Risk:** Household Care dominates product revenue — diversifying into Grocery, Personal Care, and Pharma will reduce category dependency.
- **Customer Retention Gap:** With 24.6% inactive customers, a structured CRM/loyalty program could recover significant lost revenue.
- **Marketing Efficiency:** Despite equal spend across 4 channels, App and Social Media drive disproportionately more conversions — reallocating 20% of Email/SMS budget to App could boost ROAS further.
- **Operational Strength:** 96.3% stock quality and 3,098 delivery partners show strong ops infrastructure — leverage this as a competitive advantage.
- **Seasonal Strategy:** Aug–Oct demand spikes provide a clear window for premium promotions, bundled offers, and new product launches.

■■ Technical Details

Tool	Microsoft Power BI Desktop
Data Source	CSV / Excel — Grocery Sales Dataset
Visuals Used	KPI Cards, Line Charts, Bar Charts, Donut/Pie Charts, Map Visual, Area Charts, Matrix Table
Interactivity	Slicers: Year, Segment, Area, Channel, Delivery Status, Feedback Category, Sentiment, Product Name
Pages	Introduction · Customer · Product · Marketing · Inventory & Feedback
Filters	Cross-page filters applied for consistent drill-down experience
